1 Introduction

Aidivehub is a personal learning and documentation blog created to record daily learning, AI tool usage, SQL/Excel practice, analytics workflows, and productivity insights. The blog will serve as a central repository for tutorials, notes, and professional portfolio content.

The platform selected is **Blogger**, primarily due to its **free SSL**, zero hosting cost, and Google ecosystem integration.

2 Problem/Impact/Successful Outcome

The Problem	The Impact	The Successful Outcome
Learning content scattered across notes, files, and devices. No centralized platform to document growth.	Difficult to track progress, share knowledge, or build a professional online presence.	A structured, secure, SEO optimized blog that documents learning and supports future monetization.

3 Objectives

ID	Business Objective	Business Owner	Business Importance
O01	Create a centralized blog for documenting daily learning	Admin	High
O02	Build a professional online presence for portfolio use	Admin	High
O03	Enable future monetization (AdSense, affiliates)	Admin	Medium
O04	Maintain a cost-free, secure platform	Admin	High

4 Purpose Of Document

The Business Requirements Specification defines the business and functional requirements for the Aidivehub blog. It ensures all stakeholders (self-managed project) have clarity on scope, objectives, and deliverables.

5 Scope

Platform selected after evaluation of Wix, WordPress, and Blogger.

In Scope	Out Of Scope
Blog setup on Blogger	Paid hosting
Branding, theme customization	Custom backend development
SEO setup	E-Commerce
Content categories & publishing	Mobile app development
Google Analytics & Search Console	WordPress migration (future)

6 Definitions, Acronyms and Abbreviations

Abbreviation/Acronym	Description
SSL	Secure Sockets Layer
SEO	Search Engine Optimization
UI	User Interface

BRD	Business Requirements Document

7 Risks

Ref	Risk	BRS Reference
R01	Blogger customization limitations	Functional Requirements
R02	AdSense approval delays	Monetization Requirements
R03	Platform dependency on Google	Non-Functional Requirements

8 Assumptions

Ref	Assumption	Reference
A01	Blogger selected based on platform evaluation (Wix vs WordPress vs Blogger)	Scope
A02	User will maintain and update blog regularly	Scope
A03	No paid tools will be used initially	Scope

9 Issues

Ref	Issue	Reference
I01	None identified	-

10 Dependencies

Ref	Dependency	Detailed BRS Reference
D01	Google account for Blogger	Platform
D02	Internet connectivity	All processes

11 As Is Process

Currently, learning is documented in scattered notes, files, and apps. No centralized platform exists.

12 Context Diagram

Actors:

- Admin (Content Creator)
- Blogger Platform
- Readers
- Google Analytics / Search Console

Flows: Learning → Blog Post → Publishing → Analytics Tracking

13 Process Overview Diagram

- Learn topic
- Draft content
- Format & publish on Blogger
- Add labels, SEO metadata
- Share & track analytics

14 High Level To Be Business Requirements

- A structured blog with categories

- SEO-optimized posts
- Secure (SSL) platform
- Easy publishing workflow
- Future monetization support

15 Detailed Business/IT Requirements

15.1 Functional Requirements

ID	Title	Description	Type	Priority	Originator	Status	Delivered By	Test ID
FR001	Blog Setup	Create blog on Blogger with URL aidivehub.blogspot.com	Business	Must	Admin	Proposed	Blogger	T01
